

Dimensional tolerances

JESA.
bearing solutions

The tolerances concerning the dimensions of a bearing and the circularity of its rotation are part of international norms, such as **DIN 620 and ISO 492** for bearings with metric dimensions.

JESA bearings are manufactured according the following tolerance norms **DIN P0, P6, P5 and P4, respectively AFBMA ABEC 1, ABEC 3, ABEC 5 and ABEC 7**. For other types of functions of our special bearings, we adapt the tolerances to the requirements of the application.

The particular tolerances valid for inner and outer deep groove ball bearing rings are indicated in the following charts :

Inner ring

Tolerance class	Nominal bore		Tolerance		Bore variation				Variation			Width tolerance		Width variation		Circularity	Lateral runout	Axial runout
	d		Δdmp		Vdp				Vdmp			ΔBs		VBs		Kia	Sd	Sia
	Tolerance																	
	from	to	sup	inf	Serie				max	sup	inf.	max.	max.	max.	max.			
	mm	mm	μm	μm	7.8.9	0.1	2.3.4	-	μm	μm	μm	μm	μm	μm	μm	mm		
P0	2,5	10	0	-8	10	8	6		6	0	-120	15	10	-	-			
ABEC 1	18	30	0	-10	13	10	8		8	0	-120	20	13	-	-			
P6	2.5	10	0	-7	9	7	5		5	0	-120	15	6	-	-			
ABEC 3	18	30	0	-8	10	8	6		6	0	-120	20	8	-	-			
P5	2,5	10	0	-5	5	4	4		3	0	-40	5	4	7	7			
ABEC 5	18	30	0	-6	6	5	5		3	0	-120	5	4	8	8			
P4	2.5	10	0	-4	4	3	3		2	0	-40	2.5	2.5	3	3			
ABEC 7	18	30	0	-5	5	4	4		2.5	0	-120	2.5	3	4	4			

Dimensional tolerances

Outer ring														
Tolerance class	Nominal outer diameter		Tolerance		Variation of outer diameter				Variation	Width tolerance	Width variation	Circularity	Perpendicularity	Axial runout
	D		ΔD_{mp}		VDp				VDmp	ΔCs	VCs	Kea	SD	Sea
	Tolerance													
	from	to	sup	inf	Serie				max	***	max.	max.	max.	max.
mm	mm	μm	μm	7.8.9	0.1	2.3.4	0.1 2.3 4	μm	μm		μm	μm	mm	
PO	6	18	0	-8	10	8	6	10	6				-	-
ABEC 1	30	50	0	-11	14	11	8	16	8			20	-	-
P6	6	18	0	-7	9	7	5	9	5		8	-	-	
ABEC 3	30	50	0	-9	11	9	7	13	7		10	-	-	
P5	6	18	0	-5	5	4	4	-	3	5	5	8	8	
ABEC 5	30	50	0	-7	7	5	5	-	4	5	7	8	8	
P4	6	18	0	-4	4	3	3	3	2	2.5	3	4	5	
ABEC 7	30	50	0	-6	6	5	5	5	3	2.5	5	4	5	

*** The width tolerances ΔCs are identical to ΔBs for corresponding inner ring

Dimensional tolerances

JESA.
bearing solutions

	Vdmp	<p>Average external diameter variation : difference between the biggest and the smallest average bore diameter of a ring or a disc (conicity).</p>	d	Nominal bore diameter			
	Δd_{mp} (dm)		Average bore diameter : arithmetic average between the biggest and the smallest bore diameter, measured in radial plan.	Vdp	Bore diameter variation : difference between the biggest and the smallest bore diameter, measured in radial plan (circularity default).		
	VDmp	<p>Average external diameter variation : difference between the biggest and the smallest average external diameter of a ring or a disc (conicity).</p>	D	Nominal external diameter of outer ring			
	ΔD_{mp} (Dm)		Average external diameter: arithmetic average between the biggest and the smallest external diameter, measured in radial plan.	VDp	External diameter variation : difference between the biggest and the smallest external diameter, measured in radial plan (circularity default).		
			$\Delta B_s, C_s$ (B)	Width tolerance : width measured from inner ring respectively outer ring, measured in an isolated point.			
			$V B_s, V C_s$ (Up)	Ring width variation. Difference between the biggest, respectively the smallest width of an inner, respectively outer ring.			
			Kia, Kea (Ri, Ra)	False-round (radial flapping) of the inner, respectively outer ring, measured on the assembled bearing.			
			Sd (Si)	Lateral flapping of the inner ring			
			SD (Sa)	Lateral flapping of the outer ring : cylindrical envelope slope variation in comparison with the reference surface.			
			Sia, Sea (Ai, Aa)	Axial flapping of the lateral surface in comparison with the inner, respectively outer ring trajectory of the assembled bearing.	F	D
